

There are two ways to determine which version of the USA-49WG you have, the first way being the housing artwork on the unit. The v1 artwork features the Tripp Lite / Keyspan logo centered at the top of the housing, with the product description / model name directly below it. The v2 artwork features the Tripp Lite / Keyspan logo and the product description / model name side by side and centered at the top of the housing. The model name is followed by the text v2. The artwork for both is shown directly below.

v1 Artwork

v2 Artwork

The second way to determine the version is to check your product's serial number, which is located on the bottom of the unit (see photo below). Characters 8 through 13 in the serial number represent the SKU number. If you see the SKU number CU7105 or CU8037, you have v1. If you see anything else, you have v2. If your unit does not have a serial number, or has a serial number that does not match the format shown in the below photo, contact Tripp Lite Technical Support.
